

# Paw Paw

180 capsules, Single herb, Stock No. 515-6

The body's cells have important health goals. That's why it is important to keep your cells healthy and lend support to maintain normal cells in the body. Paw Paw is a unique product that selectively targets specific cells to enhance the overall health of your body.

## *How it works*

The active compounds in Paw Paw are a mixture of over 50 acetogenins. Acetogenins affect the production of ATP (Adenosine Triphosphate) in the mitochondria (the powerhouse) of the cell. ATP is the cell's, and hence the body's, major source of energy.

Acetogenins selectively modulate the production of ATP in specific cells. Modulating the production of ATP affects the viability of specific cells and the growth of blood vessels that nourish them. Acetogenins also support and enhance the effectiveness of conventional medical approaches.

## *Did you know?*

Nature's Sunshine's Paw Paw is the only standardized acetogenin product available.

Nature's Sunshine uses an extract of the twigs of the North American paw paw tree, which contain the most concentrated amount of acetogenins. These twigs are harvested when they are most biologically active, and the extract is standardized to ensure uniform potency. It's so unique, it's patent pending.

## *Scientific Support*

Dr. Jerry McLaughlin, Nature's Sunshine's former Vice President of R&D/QA and Chief Scientific Officer, has researched acetogenins and their role in cellular protection extensively. He has published over 100 articles and studies related to the benefits of these beneficial compounds found naturally in the paw paw tree and its tropical relatives.

Recent clinical studies are encouraging; one study with over 100 participants shows that the paw paw extract, containing a mixture of acetogenins, may support the body's normal cells during times of cellular stress.

## *NSP Advantage*

180 capsules containing standardized Paw Paw extract.

*Ingredients:* Paw Paw extract, cellulose, magnesium stearate, silicon dioxide.

*Recommendation:* Take 2 capsules with food three times daily. Do not exceed recommended dosage.

*Complementary Products:* Zambroza, Astragalus, Colostrum, Protease Plus, Noni

*Contraindications:* Do not take with Co-Q10, KC-X, or large amounts of antioxidant products. Only those who desire to target specific cells should take this product on a regular/daily basis.

## Features & Benefits

- Selectively affects specific cells.
- Modulates the production of ATP in mitochondria of specific cells.
- May help modulate the growth of blood vessels near specific cells.
- This patent-pending product is the only standardized acetogenin product available.
